

Smart Hardwire Kit Installation

Ground

Connect to any metal in the car

Fuses

Connect to a ignition-switched fuse

Connect to a constant fuse

With a circuit tester, test which fuse is ignition-switched and which is constant (always on).

The ignition-switched fuse will power on the dash cam when the ignition is turned on.
A fuse that is constant will stay on when the ignition is off.

A ground bolt should only be metal. Never attach to plastic.

Smart Hardwire Kit Set-Up

Compatible with the Rexing V1 & V1P
